REASONS FOR ALLOWANCE

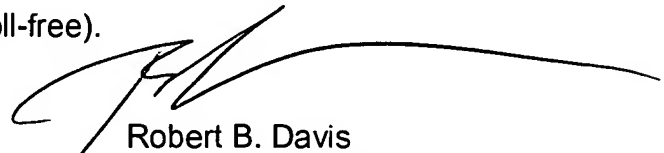

1. The following is an examiner's statement of reasons for allowance: None of the prior art of record teach or suggest an apparatus for attaching a filamentary member to a substrate having a plastic layer, the apparatus comprising: a support surface for supporting the substrate and being engageable therewith; a needle movable relatively to said support surface and adapted to penetrate the substrate to form an opening through the substrate, and a swaging tool having a swaging surface facing the support surface, the swaging tool and the support surface being movable relatively to one another so as to compress the substrate between the swaging surface and the support surface, the swaging tool having a passageway therein for receiving the filamentary member, the passageway being alignable with the opening in the substrate, the filamentary, the filamentary member being positionable through the passageway and into the opening, the swaging surface deforming a portion of the plastic layer around the opening so as to swage the filamentary member to the substrate. Claims 1-18 are being interpreted as apparatus claims and any language, which could be readable as a method limitation is being considered by the examiner to be intended use language, which describes the function of the apparatus elements during attachment of the filamentary member to the substrate. The closest prior art (Rondeau Re.36,231) discloses a punch (50) for attaching a filament (168) to a connector (164) by deformation of the connector (164) by the punch see figures 7 and 8, but the reference fails to disclose or suggest a needle movable relatively to a support surface to penetrate a substrate as the connector (164) has an initial shape of a tube.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
